SPECIFICATIONS: Listed by Underwriters Laboratories Inc and National Sanitation Foundation.

Model LT-1 low temperature (140°F) fill and dump dishwasher is delivered for straight thru operation. Three door lift design can be easily converted to a corner operation at installation. Standard electrical voltage specification is 120/60/1. No racks are shipped with machine.

***CAUTION:** Certain materials, including silver, aluminum, and pewter are attacked by sodium hypochlorite (liquid bleach).

CONSTRUCTION: Tank, doors, chamber, and sump constructed of 16 ga. stainless steel, heliarc welded. Frame constructed of 12 ga. and 16 ga. stainless steel.

DOOR LIFT: All three doors coupled by chrome plated handle and spring counter-balanced. All doors guided for ease of operation and long life.

PUMP: Integral with $\frac{3}{4}$ H.P. motor assures alignment and quiet operation. Pump shaft seal with stainless steel parts and a carbon ceramic sealing interface. Pump capacity is 45 gpm.

CONTROL SYSTEM: Top mounted control box features an on/off switch, drain/fill switch, cycle light, counter and de-liming switch for cleaning. Control box also contains three peristaltic pumps with individual priming switches to automatically inject correct amount of chemicals in the machine each cycle.

CYCLE OPERATION: Closing the doors starts the wash cycle thru door cycle switch. During wash cycle, detergent is injected into machine. After wash cycle, machine empties the wash water into the external scrap accumulator while the flush cycle flushes the wash systems and pump of any remaining detergent. The machine then fills for the rinse/sanitizer portion of the cycle. During the rinse cycle, wetting agent, and sanitizer are pumped into the machine. At the end of the rinse cycle, the cycle is complete. The rinse water is

retained for the next wash cycle. If the cycle is interrupted, the cycle will continue from time of interruption and complete the cycle.

Fill activates flushing of the entire system each cycle. The fill time gives the correct amount of water per cycle when the inlet pressure is 15 to 25 psig.

OVERFLOW: Automatic overflow built into drain tube and directed to external scrap strainer pan.

DRAIN: Solenoid operated drain stopper automatically empties the dishwasher each cycle. Drain stopper is large diameter, high temperature material engineered to provide free flush drain.
